DIAMONDMINE EDI SOFTWARE FROM INTELEK BRINGS POTENTIAL SAVINGS TO TMW SYSTEMS CUSTOMERS

Norman, Oklahoma - September 15, 2009
Intelek Technologies Corporation, developers of leading edge web-based EDI and load gathering solutions for the trucking industry, today announced the integration of its DiamondMine EDI translation software with TMW Suite enterprise transportation software from TMW Systems Inc.

The integrated solution enables users of the client/server-based TMW Suite to seamlessly exchange data with the DiamondMine EDI translation software and a shipper's system. The new offering follows Intelek's highly successful integration between DiamondMine and TMW's TL2000 solution for IBM iSeries or AS/400 platforms.

DiamondMineEDI translation software (now part of the Intelek EDI Transportation Suite) provided as a Software-as-a-Service solution is hosted by Intelek on its IBM iSeries platform. Accessible to users over the Internet, the product allows a carrier to communicate electronically with shippers to transfer loads, shipment status records, invoices and electronic payments using over 6,200 available EDI maps.

"We had many TMW customers asking for an integrated solution. A growing number of shippers mandate that for carriers to receive additional loads they must have EDI capabilities. DiamonMine EDI is a very effective solution that TMWSuite customers can now quickly and inexpensively implement so they can concentrate on moving loads instead of moving EDI data."

- Gary Hopkins
President of Intelek Technologies
