

Intelek Announces EDI Transportation Suite

Combining the features of EDI Transaction and Screen Scraper software into one

Simplifying Your Load Data Complexity & EDI Pricing

NORMAN, Oklahoma – June 6, 2012 -- Intelek Technologies Corporation, developers of leading edge, web-based EDI and load gathering solutions for the trucking industry, today announced the Intelek EDI Transportation Suite. The Company combined its popular StripMiner EDI Screen Scraper Software with its DiamondMine EDI Transaction software, added several new features and bundled it into a scalable, modular, hosted package. This new EDI Transportation Suite provides trucking companies EDI transaction software equipped with the ability to gather (scrape), post, or verify any kind of data from any website or file and return the data in any required format..

“This product is the first of its kind for the transportation industry,” said Gary Hopkins, President and founder of Intelek Technologies. “EDI is perhaps the most non-standard ‘standard’ in any industry today. Shipper requirements and formats are constantly changing, making it almost impossible for trucking companies to keep up. With our new Intelek EDI Transportation Suite, we are not only giving our customers automated 24/7 load gathering capabilities, but we are giving them all the necessary tools to meet National EDI Standards as well. In any format!”

Using a unique engine to recognize patterns in shipper web sites, the Intelek EDI Transportation Suite pulls information from any format and delivers it back in any format. The software automatically searches your partner websites for loads that meet specific criteria determined by a carrier’s business practices, such as; lanes, charge, distance and weight. When a match is located on a shipper’s web site, the solution automatically “scrapes” the load and performs a variety of functions, including: automatically accepting the load, issuing a 204 for CSR review, and sending an email.

“We understand that no two freight carriers or their shipper requirements are the same,” explained Hopkins. “Some use EDI transactions, while others post on a website or send on an Excel spreadsheet. The format doesn’t matter. We will automate the process and send it back in any format our customer wants.”

The easy-to-implement and flexible solution can be used with any communication platform, including Direct FTP, Secure FTP, AS1, AS2, AS3, SSH, FTPS, email or existing Multi-VAN services, saving monthly data transmission costs. The Suite includes an extensive library of thousands of EDI trading partners, in addition to accepting modules, such as GPS tracking and trading partner relationships, without any added software or hardware purchases.

Intelek EDI Transportation Suite has no per transaction or per-use fees. The hosted solution integrates with most industry leading dispatch software and for operations without a dispatch solution, Intelek provides a custom web interface for accessing EDI data.

About Intelek Technologies

Since 1996, Intelek Technologies has grown from a North American consulting firm to an international provider of leading edge technologies and professional services. Pioneering the transportation market with EDI and load gathering software products, Intelek has also become a primary provider of classroom and web-based training, remote and on-site software installation and configuration, and product support services for premier manufacturers. Based in Norman, Oklahoma, Intelek is a private corporation with over 5,000 customers worldwide. **For more information visit www.IntelekTechnologies.com or call 800-353-3696.**
